

Annexes VI – Formal aspects

Annex VI-1 – Consent form for the use of publication (Prof. Dr. Freytag-Leyer)

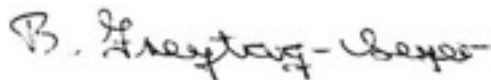

Consent form for the use of jointly published article “Food System Outcomes: An Overview and the Contribution to Food Systems Transformation” in dissertation of Stefanovic, Lilliana for the acquisition of the doctoral degree Dr. agr. at Faculty 11 of the University of Kassel

I hereby provide my consent for the above specified use of a joint publication “*Food System Outcomes: An Overview and the Contribution to Food Systems Transformation*” published in the scientific journal ‘Frontiers in Sustainable Food Systems’, Vol. 4 on September 24, 2020 (doi: 10.3389/fsufs.2020.546167) and co-authored by me as a second co-author.

This publication represents the results of a systematic literature review independently performed by Mrs. Stefanovic under the supervision of her first supervisor at that time, late Prof. Dr. Johannes Kahl, the third co-author of the publication. The findings of a systematic review were published prior to the completion of Mrs. Stefanovic’s dissertation due to the fact that this publication sought to contribute to the project at the Department of Organic Food Quality and Food Culture of the University of Kassel financed by the Software Foundation AG. The Foundation also financed the case study work carried out by Mrs. Stefanovic in her dissertation. Due to the project’s agreement, there was a need for publishing the findings of systematic literature review sooner than the date of Mrs. Stefanovic’s dissertation’s submission would have been.

Mrs. Stefanovic carried out a systematic search, the screening and final selection of publications for qualitative synthesis, performed the synthesis and summarised the findings for the afore named publication. She has also written the first draft of the article, which was then revised by me. I have also provided the guidance for Mrs. Stefanovic throughout the article’s review process revising the edited version and making suggestions on further editing required.

Due to the afore described work distribution, I hereby declare no hindrances for the inclusion of the specified publication as part of Mrs. Stefanovic’s dissertation, under condition that the authorship is indicated and the authors contribution disclosed.

Sincerely,

Prof. Dr. Barbara Freytag-Leyer,

Fulda University of Applied Sciences, Department of Nutritional, Food and Consumer Sciences
